NEED TECHNICAL EXPERTISE?

If your community is in need of engineering assistance but cannot easily retain or afford these services, we encourage you to learn more about Community Engineering Corps. Our technical volunteers provide pro-bono engineering services in all areas of infrastructure. Often this is the key piece necessary to apply for local funding to implement improvements.

COMMUNITY FIRST

The Community Engineering Corps works with underserved communities in the US on a wide variety of infrastructure projects including water supply, sanitation, civil works, energy, structural and more! Engineering services start with a request from communities like yours! If your request is approved, we will match your community with a volunteer project team that engineers a solution to advance your local infrastructure needs.

HOW TO GET STARTED

1. Visit our website for FAQs, application instructions and additional information.
2. Complete the Community Application found on our website.
3. Submit your application to cecinfo@ewb-usa.org.

This program from the American Water Works Association (AWWA), the American Society of Civil Engineers (ASCE), and Engineers Without Borders USA (EWB-USA) aims to assist underserved communities in the United States to meet their infrastructure needs and improve each community member’s quality of life.
“CECorps volunteers helped us with water supply feasibility studies in six small communities in Salinas Valley, California. We are now emboldened to think about bigger endeavors, of which there is no shortage!”

– Colin Bailey, Environmental Justice Coalition for Water

VISION

Our vision is a country where all communities have the infrastructure they need to thrive regardless of their financial resources.

MISSION

Community Engineering Corps will bring underserved communities and volunteer engineering leaders together to advance local infrastructure solutions.

PURPOSE

Community Engineering Corps is an alliance between ASCE, AWWA and EWB-USA. The alliance combines the strengths of three organizations to provide technical expertise to underserved communities in the US and ensure that their infrastructure meets their community’s needs.
